1. Imported water use data from AVEK with the exception of PWD and LCID.

2. Some water use types were uncertain and assigned a likely type.

3. As per Judgment, Boron CSD has the right to Produce Imported Water Return Flows, up to 78 AFY, based on the applicable percentage multiplied by the average amount of Imported Water used by Boron CSD outside the Basin, but within its service area in the preceding five Year period (not including Imported Stored Water in the Basin) without having to establish that the Imported Water Return Flows augment the Basin Groundwater supply.

4. Total amount of water that PWD imported.
